

Become an Agile Leader

Training: Agile Leadership

What can Leaders do to support their organization in an agile environment? In this practical training you will learn the concepts behind agile leadership how to apply them and what changes are needed to be successful

The digital transformation and the mindset of a new generation of employees currently change almost every company. Away from the traditional command and control approach, towards the servant-leader, which asks the right questions and creates an environment to help the teams to work in a self-organized way, and embraces visions instead of solutions. These aspects and many more are covered in this training: An understanding on executive level, how the company can profit from Agility, how a transformation can be done the agile way, instead of fixed assumption until the bitter end and how the company can successfully survive in a VUCA Environment (Volatility, Uncertainty, Complexity, Ambiguity). How does an agile organizational design look like? Which opportunities and challenges result for the existing management? What does this mean for the personal attitude, values and behaviours of the modern leader?

Duration

2 Days
